

Make up assignment (**Due** March 5th for Mon/Wed classes and March 6th for Tues/Thurs classes)

Due to the snow days, there are not many project grades on this quarter which makes the egg drop project weigh heavier on grades. There are two make up assignments. The first is for students that did not complete the assignment and the other is for the projects that failed (the egg broke).

For an incomplete project

The next section, we will be discussing buoyancy and density. To make up a missed assignment in this quarter you must do research on those subjects and come up with a demonstration of both. This can either be in class with a powerpoint presentation or a video can be made to show. Please discuss your ideas with me.

The research should be documented with references **in MLA format**.

For a project gone wrong

In this case, you will be improving your design. You will need to talk about the first project and why it failed (which you should already have from the presentation). Then you need to make improvements to your design and record those changes. You can record your testing on your phone, camera, etc. and show me that it works. The height (11.5 feet or more) will need to be measured with a measuring tape to prove the height. If you have problems with being able to do this at home, let me know.
